# EDUCATION

# Stony Brook University

May 2027

Bachelor of Science with Honors in Computer Science

GPA: 3.79

Relevant Coursework: Software Development, Software Engineering, Theory of Computation: Honors, Analysis of Algorithms: Honors, Data Structures, Object-Oriented Programming, Systems Fundamentals, Programming Abstractions, Linear Algebra

#### EXPERIENCE

# Compute Platform Engineering Intern

May 2025 - Aug. 2025

 $GlaxoSmithKline\ plc$ 

Seattle, WA

- Developed an interactive **Python CLI** that uses workload diagnosis to auto-select optimal HPC environments across **Slurm and Google Batch** and optimize resource specifications when applicable, with two submission modes (automatic job script generation/submission and direct environment access), **reducing compute costs by** ~10%.
- Containerized and deployed the CLI using both **Docker and Apptainer** for cross-platform compatibility on Windows, Linux, and Unix systems, with planned rollout to **3,000**+ computational scientists company-wide.
- Built proof of concept demonstrating architectural optimizations for AI/ML team's prototype agentic system's tool orchestration layer, achieving ~35% reduction in context consumption while improving performance.

# Teaching Assistant

Jan. 2025 – Dec. 2025

Stony Brook University

Stony Brook, NY

- Lead recitations, review sessions, and office hours for **250**+ students across Programming Abstractions (CSE 216) and Software Development (CSE 316).
- Help revise course materials, grade assignments/exams, and proctor exams to ensure smooth course operations.

# Student Software Developer

Sep. 2024 - Present

Stony Brook University Vertically Integrated Projects (VIP) Program

Stony Brook, NY

- Lead the HealthByte subteam and its development, delegating tasks, creating onboarding resources, and organizing meetings.
- Develop a patient-facing **iOS** app and a clinician-facing **full-stack web app** to help SBU clinicians monitor post-surgery recovery using Apple Health data and custom forms, with centralized authentication and a shared database across both applications.
- Develop Regio Vinco, an interactive web-based geography educational game helping elementary and middle school students better understand world geography, iterating on versions tested with 150+ students at partnering schools.

#### Full Stack Developer

Jul. 2024 – May 2025

QuattronKids

Remote

- Led full-stack development of **PenguinLearn**, a **RESTful educational platform**, using Next.js, React, Supabase, and Prisma ORM, enabling migration from third-party hosting and **reducing overall operational costs by** ~20%.
- Implemented a real-time messaging system within the platform for direct communication between parents and teachers.
- Built test suites with **Jest and Playwright** and set up a **CI/CD pipeline**, ensuring reliability and streamlined deployments.

# Undergraduate Researcher

Dec. 2024 - Present

Stony Brook University

Stony Brook, NY

• Investigate and develop foundational ML/NLP tools in OCaml to address ecosystem gaps in tokenization, text processing, and statistical text analysis.

#### Projects

TA Tools | Python, Flask, Beautiful Soup, Selenium WebDriver, SQLite, JavaScript

Jul. 2024 - Aug. 2024

• Developed a full-stack web application using Flask, Jinja, and SQLite to **automate logistics tasks** for teaching assistants at a tutoring center, improving task efficiency by approximately **200%** for those who used it.

### NutriProof | Python, Flask, JavaScript, OpenAI API (GPT), Wolfram Alpha API

Mar. 2025

• Built a Chrome extension to analyze user-selected text about health and nutrition using a GPT model fine-tuned on self-labeled data, parsing claims to generate Wolfram Alpha queries and re-integrating verified results for more accurate fact-checking.

# Seawolf Accessibility | Next.js, FastAPI, Python, C, scikit-learn, NumPy, Google Maps API

 ${f Feb.}$   ${f 2025-Present}$ 

- Develop an interactive campus navigation web app to recommend and visualize optimal accessible routes in real time.
- Build a custom OpenStreetMap parser in C to extract and preprocess map data for Dijkstra's algorithm, mapping building entrances/exits to support indoor traversal and using KNN to suggest alternative routes.
- Enhance the routing cost function by training a linear regression with scikit-learn and NumPy on aggregated cost data.

#### Skills

Languages: Java, Python, SQL (PostgreSQL, SQLite), Bash, C, OCaml, JavaScript, PHP, Swift

Frameworks: Pytorch, Hugging Face, scikit-learn, NumPy, pandas, React, LangChain, Next.js, Express.js, Node.js, FastAPI Tools: MongoDB, Pinecone, PostgreSQL, SQLite, Git, Docker, GitHub Actions, Ansible, Terraform, Jira, Google Cloud Platform (GCP), Amazon Web Services (AWS), MCP Servers (Model Context Protocol)

Concepts: RESTful APIs, Agile Development, Machine Learning, Natural Language Processing (NLP), Linux, LLMs
